D
 Hinter der schlichten, zurückhaltenden Form unseres BAT-Pendelleuchtensystems steckt ein Präzisionsinstrument mit höchst universellem Charakter. Denn einerseits ermöglicht BAT durch seine gezielt positionierbaren Strahler eine punktgenaue Akzentbeleuchtung zur Hervorhebung attraktiver und betonenswerter Raum-, Interieur- oder Produktdetails. Und andererseits bietet BAT durch eine beeindruckende Kombinationsvielfalt von Gehäuse- und Strahlervarianten z.B. die Möglichkeit der Zusammenstellung von Lichtbalken nach Maß, die jederzeit auch nachträglich perfekt an neue, veränderte Anforderungen angepasst werden können. Dieser modulare Charakter macht BAT nicht nur in puncto Technologie, sondern auch in puncto Design zu einer sicheren Investition in die Zukunft: Ein zeitloses, variables Trägersystem – unendlich viele künftige Anwendungen.

E
 Behind the plain, restrained shape of our BAT suspended lighting system hides a precision tool with a highly universal character. Because on the one hand the ability to position the spots of the BAT system enables precision accent illumination for emphasising attractive room, interior or product details worth highlighting. And on the other hand, BAT's impressive combinations of housing and spot variants offer the possibility to create, for example, tailor-made strip lights that can subsequently be perfectly adapted to changed requirements at any time. This modular character makes BAT a safe investment for the future, not only in terms of technology, but also in terms of design: A timeless, variable carrier system – with infinite future applications.

I
 Dietro la forma sobria e contenuta del nostro sistema di lampade a sospensione BAT si nasconde uno strumento di precisione con un carattere universale. Infatti, con i suoi faretti orientabili, BAT consente, da un lato, di porre accenti luminosi mirati, per mettere in risalto i dettagli più interessanti di un ambiente, un interno o un prodotto. Dall'altro lato, grazie a un'impressionante varietà di combinazioni fra corpo esterno e faretti, il sistema BAT offre, ad esempio, la possibilità di comporre barre luminose su misura, in grado anche di adeguarsi successivamente a ogni nuova esigenza. Questo carattere modulare fa di BAT un investimento sicuro per il futuro, non solo dal punto di vista tecnologico ma anche da quello del design: un sistema di supporto variabile e senza tempo per un numero infinito di applicazioni future.
